Now, more than ever, cybersecurity in the business landscape is paramount. By actively looking for weaknesses, businesses have the upper hand against cybercriminals. Via our strategic partnership, we are now offering Certified Ethical Hacking services for those critical environments requiring the highest level of diligence.

What is Certified Ethical Hacking

With the rising epidemic of global cyberattacks, this Ethical Hacking Service presents a friendly alternative to succumbing to the demands of cybercriminals. Certified Ethical Hacking provided by our Strategic Partner provides an additional layer of checks and balances from an unbiased third party.

Our cybersecurity partner simulates an assault by a hacker or someone with malicious intent to identify vulnerabilities within business technology systems. Even weaknesses appearing minor can have detrimental effects because some of the smallest exposures can lead to the biggest exploits.

Tech II recognizes that everyone is a target and we've witnessed the fallout first hand. This service will help organizations better secure their cyberassets and offer the assurances of Certified Ethical Hacking (C|EH).

This service includes:

- Vulnerability Assessments
- Ethical Hacking & Penetration Testing
- Phish Testing
